

# AUTO MAKERS WOULD TEST CARS ON SPEEDWAY

RACE COURSE TO BE SCENE OF  
LONG ENDURANCE SPINS.

BRICKLAYERS NOW AT WORK

The Indianapolis motor speedway will be used for many interesting endurance tests as soon as its new brick surface has been placed. The management has already received petitions from a dozen of the leading manufacturers of this and other cities who desire to test their cars. They are not builders of racing cars and the desired tests are for endurance more than speed. Of course, there would be speed as well, but the cars would not be sent at a racing rate. Many manufacturers throughout the country probably would jump at an opportunity to pay \$50 a day to obtain the speedway for this purpose. Their new models would be sent to Indianapolis and thoroughly tried out by the most expert mechanics and drivers. The cars would be run on the speedway until forced to stop for repairs, when they would be taken to the speedway garages and examined for weak spots. The speedway management has announced its willingness to turn the track and garages over to the automobile manufacturers.

## Course Graded for Brick.

The big speedway course is now being graded for a brick surface. When completed it will be the first brick track ever built and the experiment is attracting much attention. The Wabash Clay Company, of Veedersburg, Ind., has the contract for furnishing the brick. It was not decided

The speedway management has announced its willingness to turn the track and garages over to the automobile manufacturers.

## Course Graded for Brick.

The big speedway course is now being graded for a brick surface. When completed it will be the first brick track ever built and the experiment is attracting much attention. The Wabash Clay Company, of Veedersburg, Ind., has the contract for furnishing the brick. It was not decided to resurface the track with brick until an experiment had been made and found satisfactory. When completed it is stated that the track will furnish the best pavement in the world. It will have a perfect base and the brick will be cemented. The new track is expected to be as smooth as a floor and it will be an easy matter to keep it in good repair.

Including the track, new aerodrome and new bleachers an additional sum of \$100,000 is being spent on the track, which will make the cost of the entire plant reach \$600,000.
