

MARMON CAR WILL SEEK WORLD'S SPEED RECORDS

SPECIAL RACING MACHINE IS
BEING BUILT FOR HARROUN.

WILL RACE AT LOS ANGELES

[By Carbareter.]

At the plant of the Nordyke & Marmon Company in this city there is being built what will be the first high power racing model car to be turned out by an Indianapolis automobile plant. The Nordyke & Marmon Company, encouraged by the excellent results obtained by the Marmon stock model cars in the various big race events during the last season, decided to get into the racing game proper. This decision resulted in plans being drawn for a special racing car, which is now under course of construction.

The new car is of the six-cylinder type and will have a low cigar-shaped body, especially designed for racing machines. This type of body, it is believed, offers the least wind resistance, besides attracting attention to the car as the special racing type. The new car is being built for Ray Harroun, who drove the Marmon "52" to victory in several of the big events last season, and will be one of the number to take part in the big coast invasion next month at Los Angeles. A special racing program has been arranged for the famous old Ascot track during February, while early in April the new board track will be opened. This track is to be a true circle in shape and one mile

WILL RACE AT LOS ANGELES

[By Carburator.]

At the plant of the Nordyke & Marmion Company in this city there is being built what will be the first high power racing model car to be turned out by an Indianapolis automobile plant. The Nordyke & Marmion Company, encouraged by the excellent results obtained by the Marmion stock model cars in the various big race events during the last season, decided to get into the racing game proper. This decision resulted in plans being drawn for a special racing car, which is now under course of construction.

The new car is of the six-cylinder type and will have a low cigar-shaped body, especially designed for racing machines. This type of body, it is believed, offers the least wind resistance, besides attracting attention to the car as the special racing type. The new car is being built for Ray Harroun, who drove the Marmion to victory in several of the big events last season, and will be one of the number to take part in the big coast invasion next month at Los Angeles. A special racing program has been arranged for the famous old Ascot track during February, while early in April the new board track will be opened. This track is to be a true circle in shape and one mile in circumference. It will be seventy-five feet in width and uniformly banked to a gradient of three in one and be twenty-five feet high on the outer edge.

Harroun's car will be in the same class as the big Benz and De Palma's original Fiat Cyclone, against both of which he will compete at Los Angeles. George Robertson has also announced that he will compete in the coast meet in a new racing car the Simplex people are building for him.

Oldfield Favors Mile Track.

As yet no driver has been selected for the big Benz in the coast meet and a keen rivalry for the honor has sprung

The national league secretary, and has in the National League.
