M. Keator and William
a Buick Motor Car Company,
a five-hundred-mile
to witness the

progress the speed king has made in tuning up his mount. They expressed themselves as more than pleased at the manner in which he reeled off lap after lap with apparently no difficulty of any kind.

The timing apparatus at the speedway is still uncompleted, though the track trap has practically been set in position, and the necessary wiring is being installed. Berns Nadall, chief engineer of the Stewart-Warner corporation, is in town at present supervising the final details of the work in person. A tryout of the system may be expected in the near future.

With the route of the Indiana-to-Pacific tour finally determined, the advertising men of the I. A. M. A. met for their weekly noon luncheon at the Hoosier Motor Club today with peace and contentment surging through their bosoms. All they could see in front of them was a triumphal march to the coast, such as the country has never seen before. In the meanwhile they are busier than ever with preparations to make the trip a success, especially from the point of view of publicity, which, naturally, because of their profession, they consider the most important part of the whole enterprise.

An Empire will serve as pathfinder in the Little Chadden tour, to be held in June under the auspices of the Iowa State Automobile Association over a route of approximately one thousand and fifty miles. The car which will be used is one fresh from the factory, having been taken out only the other day by J. E.
