NO SENSATIONS FOR OLDFIELD.

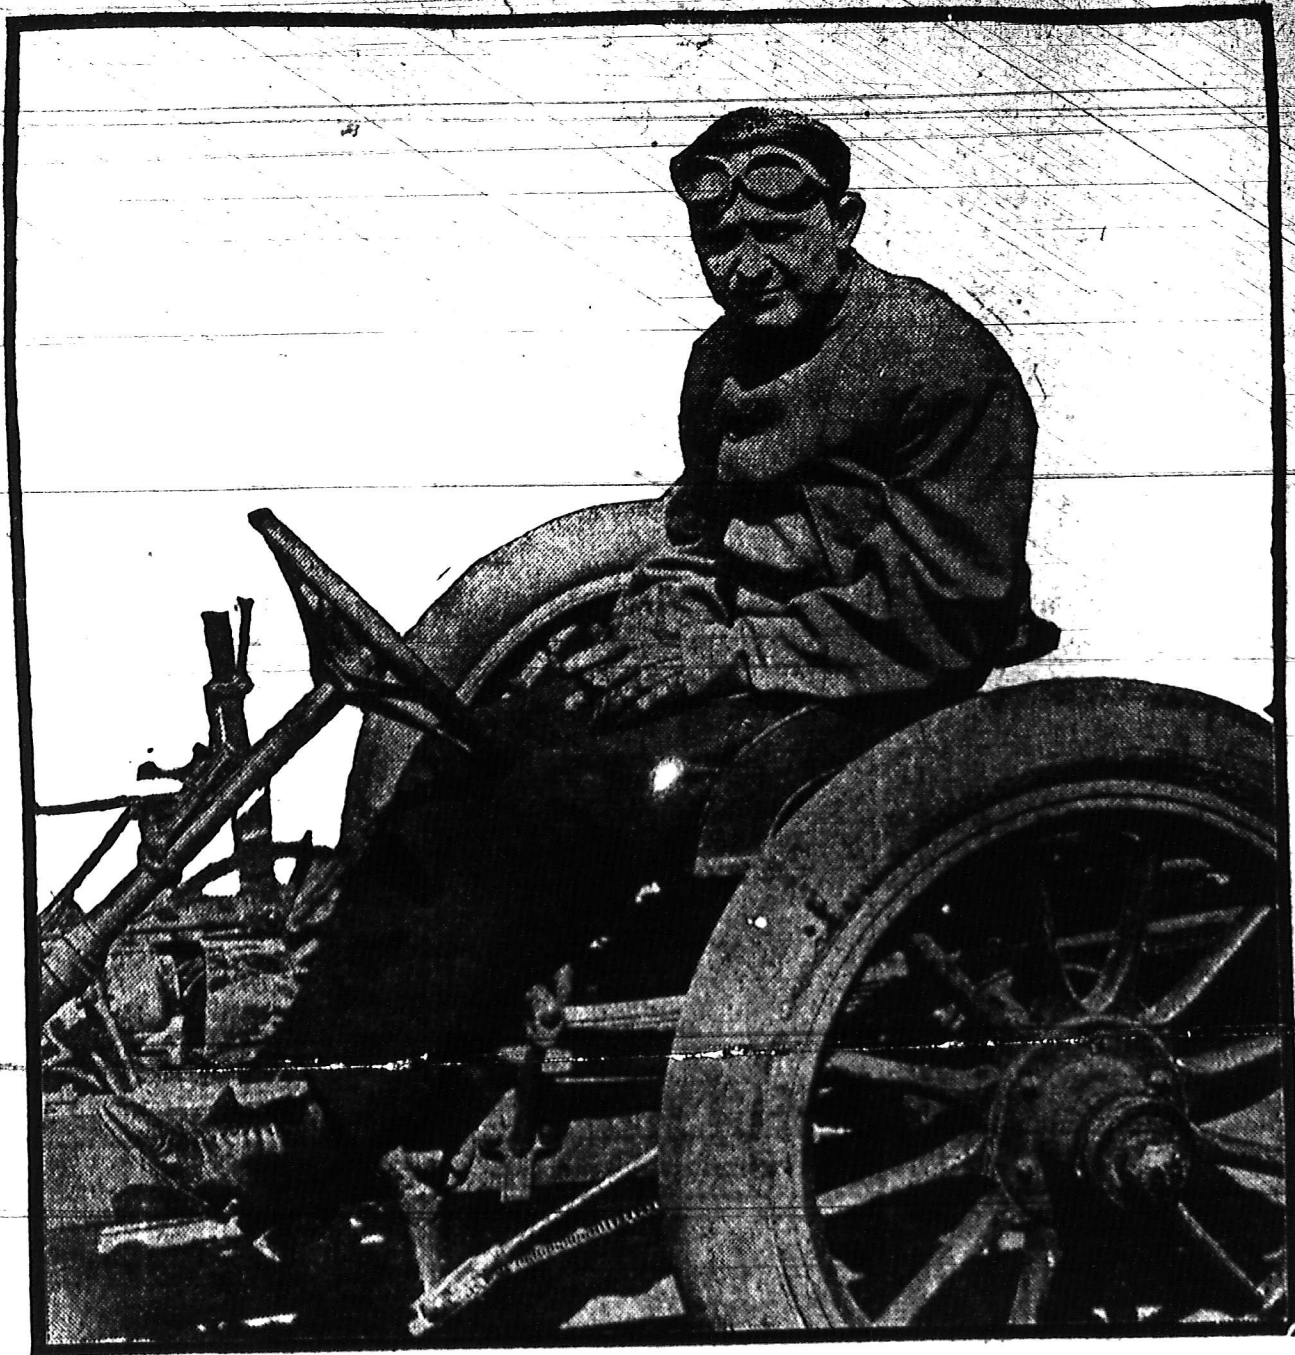

"What sensation do you experience when going around a track at less than a mile a minute?" inquired a bystander of Barney Oldfield yesterday. "If I should stop to think about a sensation going at that rate of speed I would perhaps find myself in a heap on the other side of some high board fence," replied Oldfield with a smile.

"This thing of indulging in sensations is all right when a man is first starting in the business but with me it is now a secondary consideration and if I should even hesitate for a moment in going around a track at less than a mile a minute I would never know what struck me or, better than that, I would never know what I had struck."

"When I first started track racing I used to feel the exhilarating influence of the speed at which I was traveling but as I began to clip seconds off the mile record I turned all attention to my machine, and now it is a mechanical piece of work with me, this thing of going around a track at a rate of speed that has never been approached, and I am just as much a mechanical part of the machinery as the steering apparatus."

"My hand does this and my foot does the next thing. Now just suppose I was to stop for a moment and think about how I was feeling and see what would be the result. I would forget to use my hands and my feet and an accident would be the result. I would forget to use my hands and my feet and an accident would be the result. I would forget to use my hands and my feet and an accident would be the result."

TELLS OF HIS ACCIDENTS

Barney Oldfield Says That World
Is "Speed Mad" and More
Dangers the Better.

"We are living in a fast age," said Barney Oldfield while regaling a number of friends in the lobby of the Claypool Hotel yesterday, "and the man who is willing to sacrifice his bones and gore on the altar of a highly seasoned sport is the man of the hour. It is not enough that Americans bring forth beautiful specimens of inventive genius and mechanical skill, but they must be raced around a circular track where there is a chance of killing a driver or two. It

NO SENSATIONS FOR OLDFIELD.

"What sensation do you experience when going around a track at less than a mile a minute?" inquired a bystander of Barney Oldfield yesterday. "If I should stop to think about a sensation going at that rate of speed I would perhaps find myself in a heap on the other side of some high board fence," replied Oldfield with a smile.

"This thing of indulging in sensations is all right when a man is first starting in the business but with me it is now a secondary consideration and if I should even hesitate for a moment in going around a track at less than a mile a minute I would never know what struck me or, better than that, I would never know what I had struck."

"When I first started track racing I used to feel the exhilarating influence of the speed at which I was traveling but as I began to clip seconds off the mile record I turned all attention to my machine, and now it is a mechanical piece of work with me, this thing of going around a track at a rate of speed that has never been approached, and I am just as much a mechanical part of the machinery as the steering apparatus."

"My hand does this and my foot does the next thing. Now just suppose I was to stop for a moment and think about how I was feeling and see what would be the result. I would forget to use my hands and my feet and then the whole machine, human and metal, would cease to be for a time and an accident would result."

"So you can see it is for me to keep my eye on the track and my mind off sensations."

is not enough that we have wonderfully complete and comfortable express trains. There must be an eighteen-hour limited with a schedule that admits of no time being wasted in safeguarding the passengers from collision and disaster. The rational diversions no longer satisfy. Instead, the sports that savor of a casualty list are the ones that prove most popular.

"This love for danger is in the air and the truth of my assertion is proven by the great demand for daring and dangerous acts for the circuses. The old loop-the-loop act with the bicycle was once thought to be the very limit of daring. But it soon played out and they brought forth the loop act, performed with an automobile. Two women were killed in preparatory rehearsals and the success of the act as a drawing card was assured. But the ordinary automobile loop act was not as prolific from the bone breaking standpoint as was demanded, so they added a couple of flip-flaps in the air to the stunt, and so far the press agents' claims have been fulfilled for they have killed and maimed three of the performers already, with the season only three months old."

"How long would steeple-chase racing last if it were not for the numerous accidents, and no steeple-chase event is classed as exciting until an accident or two has happened? Take football; eliminate the rough tactics and it would prove just about as exciting as a game of drop-the-handkerchief at a church social. But because players are hurt and killed, and because the ambulance calls are frequent, the sport is in great vogue and one of the best patronized in the country."

Has Seen Bull Fights.

"I have witnessed bull fights across the river from El Paso, Texas. Four-fifths of those I saw there one Sunday were Americans, and in that particular place they patronized the sport largely and make its continuance possible. Why, in St. Louis a couple of years ago, an enterprising promoter advertised a genuine bull fight, and a crowd numbering over 30,000 persons was attracted. Of course, the authorities stopped the affair, but the people showed that they were disappointed in not having an opportunity to witness an exhibition where gore was to be spouted in large streams, by tearing up the grandstands and fences of the enclosure. If bull fighting was allowed in this country it would prove more popular than in Spain. It is the law and not the lack of patronage or desire on the part of the people to witness it, that suppresses it."

"I have crashed through fences a dozen times while racing on the track and on four of these occasions spectators were killed. It was because they had crowded past danger lines that were stretched off with ropes. They knew the danger and scented it, yet they could not get too close to where they knew an accident was likely to happen. Time after time I have refused to start in a race until spectators were put back from the fences that surround the side of the track. But before I had driven a mile they would rush past the police and wave their hands as I went by at the rate of seventy miles an hour, half-skidding and half-skidding into the

will tell you of the exhilaration he experiences while driving over the road, past trees and scenery at sixty miles an hour. This speed craze is far reaching in its effect. There is no stopping it, once it has a man in its firm grasp. As one goes skimming over the road at a suicidal gait, he can almost see old Father Time, with his beckoning smile and scythe in hand, extending an invitation to speed faster."

"The whole country is speed mad, and contests between horses and between automobiles must be near the record mark before, real interest is shown by the crowd in the grand stand. I frequently sit in a public place and overhear a conversation between two men. One is saying, 'Let's go out to the automobile races and see that fool Oldfield kill himself.' I haven't much of a chance to be an ego-list, for I realize then that it is not any love of the sport that draws them, but because they scent the danger and don't want to take a chance to miss seeing that 'something happen.' If I could guarantee to go through the fence in Indianapolis Wednesday the merchants would have to close their stores, for they would have neither customers nor clerks."

"The street cars could not haul the crowd, nor would the enclosure hold them. They are unwilling to admit it individually, but it is the chance of an accident that draws them."

LIVES WITH BRAIN LAID BARE.

Promised Recovery of Monop Brakeman
Puzzles Physicians.

NEW ALBANY, Ind., May 28.—The case of John V. Root, a Monop brakeman, who fell from a moving train last Saturday and crushed his skull, is attracting the attention of physicians here. With the loss of two square inches of the bone of his forehead over the left eye, the destruction of a portion of the lining of the brain and the laceration of the brain, the man is still alive, and for the past three days has been rapidly improving, with a fair chance for his recovery. For four days he lay as one in a trance, without evidence of consciousness or feeling, but he has regained consciousness, takes nourishment and, barring the development of complications, he may recover. Should Root recover his case will go into the records of the medical authorities as one of the remarkable discoveries of the age.

Measure Regals Ready to Try On

"Measure" means built to fit your feet. The shoe to order, but it's made to your measure just as accurately as if we took your measure first with a tape and kept you waiting three weeks for your shoes.

Quarter sizes! The Regal is the only shoe made up in quarter sizes—and that's what makes the fitting sure—that together with the wide variety of Regal styles and the completeness of the quarter-size range. 58 new Regal models to choose from. Eight widths in every style and quarter-size variations all the way through.

Not one single model in the whole list that would be out of place—or out of sight of other Regals—in the most exclusive social circles.

MIDDLETOWN, Conn., May 26.—Williams won the tri-collegiate tennis tournament today with Wesleyan second. Dartmouth did not conclude its game, as the men wanted

"I have crashed through fences a dozen times while racing on the track and on four of these occasions spectators were killed. It was because they had crowded past danger lines that were stretched off with ropes. They knew the danger and scented it, yet they could not get too close to where they knew an accident was likely to happen. Time after time I have refused to start in a race until spectators were put back from the fences that surround the side of the track. But before I had driven a mile they would rush past the police and wave their hands as I went by at the rate of seventy miles an hour, half-sliding and half-skidding into the straights from the dangerous turns. A bursted tire or the breaking of a piece of steel half an inch in diameter in the steering gear would mean a fearful accident. I have smashed up seven times and I know what it all means. I want to call the attention of business men I can see. There has been a lot of talk during the past year about preventing such accidents. The best way to prevent them is to keep the spectators away from the track. As long as we live we will do our best to keep the public safe and sound. We will give no place to those who are so fond of being killed and maimed."

THE END

"Billy Sunshine."

"When I first started track racing I used to feel the exhilarating influence of the speed at which I was traveling but as I began to clip seconds off the mile record I turned all attention to my machine, and now it is a mechanical piece of work with me, this thing of going around a track at a rate of speed that has never been approached, and I am just as much a mechanical part of the machinery as the steering apparatus.
