

FRAME LAW TO BAR PREST-O-LITE PLANT

President of Council and City Attorney Draft Ordinance to Be Presented Tonight.

WILL HOLD SPECIAL MEETING

Councilmen, Stirred by Frequent Explosions, May Take Action Against Gas Company.

W. J. Neukom, president of the City Council, and Crate Bowen, city attorney, have drafted an ordinance to compel the Prest-O-Lite plant to build outside the city limits, which will be presented to the City Council at the special meeting called for tonight for this especial purpose. By suspension of the rules, the ordinance can be introduced and placed upon its passage at this meeting. Because of the repeated explosions of the Prest-o-Lite plant public sentiment seems to favor its immediate enactment, though the Prest-o-Lite Company is making no effort at present to make gas, or charge tanks.

The city jurisdiction extends one mile beyond the city limits. President Neukom said yesterday that it was a question in his mind whether the ordinance should not compel the removal of the plant to a point outside the city's jurisdiction. "I shall see the city attorney in the morning," said Neukom yesterday, "and get his draft for the ordinance. If he deems it advisable from a legal point

action. I shall see the city attorney in the morning," said Neukom yesterday, "and get his draft for the ordinance. If he deems it advisable from a legal point of view I think I shall have him compel the location of all such plants outside the city's jurisdiction.

"The Prest-o-Lite Company, in charging tanks at the South street plant, was in open violation of the law. The ordinance passed in April, which was drafted to permit the location of the plant upon the river bank site, where the company now has a new plant about completed, clearly stipulated that the business must be operated under restrictions which did not exist at South street. There was an agreement that the charging of tanks at the South street plant was to stop at once. However, the law has been in effect only since about the first of the month."

"We are, of course, perfectly willing to abide by whatever action the City Council may take in this matter," said Carl G. Fisher of the Prest-o-Lite Company yesterday, "but hope that we shall at least be given time to build outside the city limits before an ordinance compelling us to do so is passed. We have the plant upon the river bank and Missouri street, near the Van Camp Packing Company, about completed. It can be put in operation in ten days. The public will probably think the statement absurd, but we have profited by our experience in explosions, in that we believe we have in the plant on the river bank eliminated all possibility of accident. In any event we are so situated that no property but our own can be damaged.

"The trouble before has been in the charging pipes, the pumping engine, or, as in the last explosion, in the storage drums. We never regarded the storage drums as dangerous, and I believe that in the present instance if it had not been for the back pressure gas rushing upon the engine when the cylinder head was blown out the storage drums would not have exploded. However, in the new plant we have done away with the storage tanks, which were about eighteen inches in diameter by ten feet long, and are charging direct to the small cylinders of the size carried upon the auto. With the doing away of the storage drums the

"The trouble before has been in the charging pipes, the pumping engine, or, as in the last explosion, in the storage drums. We never regarded the storage drums as dangerous, and I believe that in the present instance if it had not been for the back pressure gas rushing upon the engine when the cylinder head was blown out the storage drums would not have exploded. However, in the new plant we have done away with the storage tanks, which were about eighteen inches in diameter by ten feet long, and are charging direct to the small cylinders of the size carried upon the auto. With the doing away of the storage drums the necessity for the charging pipe is gone. The only element of danger left is the pumping engine. At the new plant the engine is in a room by itself. The cylinder head points toward the river so that in case of explosion the force of it would be spent in the direction of the river."

"The small auto tanks will be stored in three different rooms, all separated by
