

AVOID IRRATIONAL RUNS

AUTO OFFICERS SEEK PEACE

NATIONAL LEADERS OF MOTOR GAME URGE CARE IN CONDUCT OF CON- TESTS ON ROADS TO PRE- VENT TROUBLE.

The public must now realize that automobile contests are in their infancy. However, the most expert men in the business can not tell what turn the sport is going to take next. The whole manufacturing world is divided on the subject of racing. One maker says the sport is of no benefit to the industry, another says it helps more than anything else. Some favor a speedway, but urge the importance of practical contests.

Racing undoubtedly has a very material function in mechanical progress. It develops the art of driving specifically and executive ability broadly. It has a great human interest, which will not and should not be suppressed. It is undoubtedly the supreme test, for one thing, and its excitement and interest have proven of such a nature as to draw the biggest crowds ever seen at any sporting event.

Stimulates Efforts.

The road race naturally stimulates the strongest efforts of the designer, the draftsman and the manufacturer. To continually improve the result to the limit of skill is to gain for the factory and the industry.

Healthy growth and development can, however, proceed on no other than rational lines. The members of the Association of Licensed Automobile Manufacturers have done much to encourage rational contests and keep them within proper bounds.

Recently in various parts of the country challenges to speed and endurance contests on the public highways have been issued. Wherever such contests involve a violation of the village, town, city or state speed laws, obviously they should not be tolerated. The inhabitants of the territory passed through at an illegal rate of speed may very reasonably have a feeling of bitter and retributive resentment, which may very possibly record itself in positive legislative action, which will oppress the fair-

Recently in various parts of the country challenges to speed and endurance contests on the public highways have been issued. Wherever such contests involve a violation of the village, town, city or state speed laws, obviously they should not be tolerated. The inhabitants of the territory passed through at an illegal rate of speed may very reasonably have a feeling of bitter and retributive resentment, which may very possibly record itself in positive legislative action, which will oppress the fair-minded autoist and militate against the interest of the automobile industry as a whole and impede the normal development of mechanical road traction.

Adverse Laws.

Such short-sighted affairs can only tend strongly to precipitate contemplated adverse laws in the form of bills proposed in the various state halls of legislature, or, unhappily, to defeat the passage of such liberal legislation as may have received some encouragement. There was an instance of the last mentioned kind in a state near by recently.

It is impossible to forecast what may be the result of any 'cross-country' road race at speed. It is difficult to run a race in which speed is not used, no matter how the driver may be limited in action. Invariably speed laws will be broken.

Let us consider the worst effect of all. Motorists in this country, assisted by a good many other people, are doing their utmost to get good roads appropriations through state legislatures and Congress. The enactment of such laws will be of considerable benefit to the field and prevent the making of new ones. It should only be necessary to recall to any thoughtful mind that good roads are largely the chief one way of getting.

It would seem that the making of good roads should be encouraged to be carried out by the government, and to be properly maintained and improved during the term of the race. During the term of the race, the government should be encouraged to be properly maintained and improved during the term of the race.

ties enough to race on properly guarded courses in due observance of law.

A reliability contest, of not more than a day's duration, over recognized automobile thoroughfares, conducted by promoters who obligate themselves that speed laws will not be violated (safeguarding this obligation by proper controls), can result in the fair promotion of the sport, and in properly testing out new models for manufacturers.

ROBERTSON ACTS AS IF INSANE

Saves Monkey Wrench, but Throws Nuts and Bolts.

Julian Street, the writer, in his "Modern Mercuries," a story of racing drivers, tells this typical incident of George Robertson, winner of the Vanderbilt cup.

"Big, solid, sunny George Robertson, who looks as though nothing could move him, is nevertheless, a very high strung driver. In a race I have seen him acting like a raving maniac. He has been known to strike the men in the supply pits when they did not start quick enough to fill him. I absolutely insist, and give you the idea that he is forcing his car to the utmost all the time, which is pretty near the truth. Some time after the Vanderbilt race a friend told me that Robertson had turned a monkey wrench at another driver who deliberately tried to slow him down.

The next time I saw him I spoke of this story.

Robertson smiled broadly at such a thing and said he would be very glad to talk about it. He said he would be very glad to talk about it.

Let us consider the worst effect of all. Motorists in this country, assisted by a good many other people, are doing their utmost to get good roads appropriations through state legislatures and Congress. The violation of speed laws can only alienate friends in this field and prevent the making of new ones. It should only be necessary to recall to any forgetful mind that good roads are largely the sine qua non of autoing.

If road races must be run, a twenty, thirty or forty-mile course should be arranged for by consent and according to law, and be properly protected and policed during the conduct of the race. Doing anything else is worse than unkindness to a dumb animal.

Should Be Protected.

The automobile can easily survive only with its rights protected as much as possible from the hands of the Legislature and Administration. It will continue to be a challenge to the public mind, and it is important

"Big, solid, sunny George Robertson, who looks as though nothing could move him, is, nevertheless, a very high strung driver. In a race I have seen him acting like a raving maniac. He has been known to strike the men in the supply pits when they did not show speed enough to suit him, is absolutely intrepid, and gives one the idea that he is forcing his car to the utmost all the time, which is pretty nearly true. Some time after the Briarcliff race a friend told me that Robertson had hurled a monkey wrench at another driver who deliberately tried to block him.

"The next time I saw him I spoke of this story.

"Robertson seemed incensed at such a malicious tale. He denied it vehemently.

"What? Me? Me throw a monkey wrench at any one? Well, I guess not!

Do you think I'm crazy?"

"No, no, George, I said peacefully, I only asked.

"Why," he continued, "I might need my monkey wrench more than any other fellow. Throw it away! Not me!"

"It slipped over to his car and picked up a handful of nuts and bolts.

"What?" That's what he threw. They are just as good as a wrench and we
