Shows Temperature With Radiator

A new feature of the radiator cap is a thermometer that shows the temperature of the radiator. When the temperature of the radiator continues to rise, the thermometer indicates a lack of water in the radiator. For instance, if the radiator is operating at 175 to 200 degrees, in a human being the temperature of the system is rising. The cars so equipped have an advance feature for the radiator cap unless the thermometer indicates a lack of water in the radiator. DePalma, Knipper, drivers who are
