**STRANG, ROBERTSON, LYTLE AND
DALPH DE PALMA AMONG THOSE
WHO WON AMERICAN HON
ORS OF YEAR.**

In America the honors of the year
just ended, so far as drivers of racing
automobiles are concerned, went to
a few men. Lewis Strang, George Robert-
son and Herbert Lytle were at the head
of the list among the home-bred group,
with Ralph de Palma adding to his rec-
ord as a track driver by making the fast-
est single lap in the Grand Prize race at
Savannah.

Lewis Strang drove Isotta cars to vic-
tory at Savannah in March, at Briarcliff
and at Lowell; was second to Herbert
Lytle, who had taken an Isotta and left
Strang a Renault in the Motor Parkway
Sweepstakes and, again driving a Re-
nault, was sixth in the Grand Prize race
—as good a record as any man can show.

George Robertson won the stock car
race at Fairmount Park, Philadelphia, in
a Locomobile, and drove a racer of the
same make to victory in the Vanderbilt
Cup race two weeks later. He was to
have driven a Panhard at Savannah, but
the car was not entered at the last mo-
ment.

Lytle Wins Parkway.

Herbert Lytle was second to Lewis
Strang in the Savannah stock car race,
driving an Apperson, and won the Mo-
tor Parkway Sweepstakes in an Isotta.
In the Vanderbilt Cup race his Isotta
car was beaten by less than two min-
utes, although disqualified two weeks ago.
He was to have driven a car in the
light car race, won by W. M. Hillard, but
was suffering from typhoid fever at the
time.

Several of the famous foreign drivers
appeared in the Grand Prix race. Louis
Wagner, the winner, won the Vanderbilt
Cup in 1906, and Victor Hemery, the sec-
ond man, was victorious in that race
in 1905. Erle was new to this country,
but finished fourth in the Grand Prix in
France last year. Nazzaro, the third man,
drove in the 1906 Vanderbilt Cup race,
but his Fiat was put out by an acci-
dent. He was second in the Grand Prix
in France last year, but won it in 1907,
together with the Florio and Emperor's
Cup races.

Szisz won the Grand Prix in 1906 and
has driven here in Vanderbilt Cup races.
Duray, Rigal and Hautvast, the other
French drivers, have all taken part in
Vanderbilt Cup races, and Fourier of the
Itala team was the first of all famous
drivers to come to America. Cagno, also
of the Itala team, drove a car of the
same make in the 1906 Vanderbilt race,
but was not placed.

WOMAN WINS MAXWELL RACE.

**ENS NATIONAL AUTO ORGANIZATION
AND 20 NEW CLUBS SOON WILL
BE TAKEN IN.**

"Increasing activity in the automobile
industry and the assurance that there
will be 75,000 automobiles produced in
America this year," says Frederick H.
Elliott, secretary of the American Auto-
mobile Association, "necessarily means
the strengthening of the national auto-
mobile body and incidentally the enlarg-
ing of all of its 200 affiliated clubs em-
bracing an aggregate membership of
more than 20,000.

"Leading automobile manufacturers
are very optimistic over the prospect of
business during the present year and even
if their most conservative estimates of
new sales are realized it is easy to see
that every club affiliated with the na-
tional body will have a chance to increase
its membership fully 20 per cent. I be-
lieve that some clubs will even do better
than this, because owners of cars today
need little persuasion to show them the
advantages to be derived through club
organization.

Strengthens State Body.

"The local club turns to the state body
for more strength, and the state body
must necessarily affiliate itself with the
national organization. Thus the mem-
bers and officers of the national body
figure with absolute certainty that
through the increasing sales of new cars
the association has before it the bright-
est year in its history.

"It might be said here, however, that
while the organizers of a new club may
call their first meetings with the idea of
forming a social organization it has been
found from experience that automobile
organizations must necessarily, in order
to maintain themselves and become fac-
tors in the welfare and progress of their
home communities, be protective to a
larger extent that they are social."

"The increased interest in the national
body manifested itself with the opening
of the first automobile show of the year
at the Grand Central Palace, where a
booth was maintained for the thou-
sands of visiting automobilists who are
interested in the national body through
their local clubs or state organizations.
Fully a score of states were represented
by resident motorists who stopped at the
association's booth for information.
Many of these visitors were seeking in-
formation with a view to organizing clubs
in their home communities, and even if
only a portion of them carry out their
expressed intentions fully twenty new
clubs will be formed during the year."

TIRE PLANT IS ENLARGED.

G. & J. Company's Factory Here Will
Be Largest in World.

The G. & J. Tire Company has an-
nounced that the 1909 line of automobile
tires will include the standard clincher,
the Dunlop and the quick detachable
types, all of which will be furnished in
smooth and Balley treads.

The new G. & J. quick detachable rim
also will be featured the coming season,
and judging from the interest shown in
it at both the New York automobile shows
will be specified on a large number of
the 1909 cars.

MAY GET F. A. M. RACES

INDIANAPOLIS MAKES BID

LOCAL MOTOCYCLE ENTHUSIASTS ENDEAVOR TO BRING NATIONAL POWER WHEEL EVENTS HERE IN JULY.

On account of its location and the inducements it offers for racing Indianapolis is attracting the attention of the majority of the motorcycle manufacturers and officials of the Federation of American Motorcyclists with a view to holding the 1909 meet here instead of in the East.

The dealers and riders prominent in the F. A. M. circle in this city have pledged themselves that their home town would be the ideal place for the coming event. They declare that the prominence of which Indianapolis boasted in the days of saucer track racing and bicycle century runs should be duplicated with motorcycle honors.

Races Held in July.

The regular F. A. M. races are held in July and if the proposed five-mile banked race course is completed by that time it is probable the events will be run here. As it is a national affair there are annual entries from most of the Eastern states and many in the West, with teams expected this year from the motorcycle clubs of San Francisco, Portland and Los Angeles.

Organized in Brooklyn, N. Y., Sept. 7, 1903, the F. A. M. has devoted every minute since to the advancement of the motorcycle and the interests of the rider. It has accomplished so much that every motorcyclist owes it a debt for which membership in the federation is but a partial payment.

The motorcyclists, who in every state have been favored by legislation, owe it to the untiring efforts of the F. A. M. Wherever the rights of the motorcyclists have been attacked the F. A. M. had willingly and speedily come to their aid, and the battles fought by them have always resulted in strengthening their useful organization. Among other things it has procured for motorcyclists everywhere, whether members or not, low fees, and in many cases abolition of any fee, for the right of passage from one state to another.

It maintains a bureau of information, distributes dairies and road maps, and in many other ways gives its members tangible evidence of its valuable services. It is allied with the Amateur Athletic Union, the American Automobile Association and the National Cycling Association. Its rules have placed the sport on a stable foundation. Its endurance and reliability tests, ably and impartially conducted, have given the motorcycle all it needed to prove to the public its usefulness, speed and reliability—severe tests and widespread publicity.

WILL TOOT OVER EUROPE.

In presenting the Jackson automobile for 1909 to the motoring public the Indiana Carriage and Automobile Company, 27-23 South Capitol Avenue, is confident of success. The model shown above is the Model E touring car, five-passenger, four-cylinder, 36-40 horse power, 111-inch wheel base, pressed steel frame, equipped with everything that makes an outfit complete.
