By S. W. Elston.

If I were asked the most striking characteristic of the automobile of the present time as compared with the machines of earlier years, I should say "comfort." There is nothing which means so much to the automobile user as long as his car is running, and there is nothing which has received less attention in proportion to its value to the buyer of a car. The whole trend of motor car construction at the present time, however, is for the greater comfort of the user. I believe that in the course of a couple of years at least all automobiles will be practically as comfortable as the elements of comfort are concerned. The automobile which the motorist wants particularly to consider at the present time is the one which has maintained the general tendency of those of previous years and today offers the same of comfort.

Draws Apt Comparison.

Comfort in automobiles may be justly compared to the designing of the famous sailing vessels. A few years ago the hulls of the racing yachts had no resemblance to an American racing hull, except that both were pointed. Gradually, however, naval architects of the two countries began to pick out the good points in one another's designs. There was a gradual evolution toward sameness, and today the racing yachts of England and America differ slightly. A very similar evolution is now taking place in the building of automobiles.

Everybody, nearly, remembers the discomfort of a few seasons ago—that little "lumpy" affair into which one climbed through a little door in the back. Today that represents the very limit of discomfort. Now we have large, roomy coaches. The upholstery is good, and the cushions and backs of the seats are such that the passenger sinks naturally into a comfortable position. Foot pedals and hand levers have added greatly to the ease with which a tonneau passenger rides.

The improvement of the front seat is something to which the greater number of motorists are just beginning to awaken. In the rear seat the Chalmers has many more than two seasons ago. It is no longer necessary for the driver of an automobile to sit with his back doubled almost to his chin. We are now providing lots of leg room in front, and now seats, so that one rests in a reclining position. The foot board is so designed that it is not a nuisance to rest one's feet on it, but a rest for the legs.

In the making of comfort for the motorist, nothing has been more important than the improvement of springs and the development of shock absorbers. Now, when one does not have to be jolted from side to side of the car. Springs are so greatly improved that they sustain the car even during severe jolts, and yet give a soft ride in curves.

That the torpedo body, when properly constructed, will also mean much to the comfort of the motorist, I am convinced. At present the design is too extreme, so much of a tad, but there is much that is practical in the wholly enclosed body.

The new details of automobile construction make for greater comfort. I want to mention the wind shield and the closed car. These two features have done most to make winter driving possible by affording protection to the motorist. In a more or less degree, the same is also true of summer driving. The wind shield and the top protect the motorist from dust and dirt. The windshield and the inside drive shaft remain to be said. Their position in the agencies for comfort is obvious. We have found these two among the most popular of Chalmers' features. The top, for instance, is a great help for winter and for evening use. The closed car is an ideal car for the motorist and other professional men, whom its comfort is its chief appeal.

In closing, I would say that undoubtedly the greatest factor in making the automobile comfortable has been the motor.

FLANDERS "20."

The Reliable Auto-Exchange has received the first consignment of the new Flanders "20" automobiles, made in Detroit.

It is within the memory of every automobile owner that motor trucks used to be very common. The development in this line in the last two or three years has been phenomenal. At the present time the car which does not give satisfactory motor service have very little standing among automobile buyers. The greatest thing we can say for Chalmers cars is that they give satisfactory service on the road. This, more than anything else, means the comfort of the user.

DELMAR COMPANY ADOPTS SLOGAN, CENTERING WORK

Features Policy of "Indianapolis for Indianapolis" as Business Expands to Big Proportions.

A commendable illustration of civic pride is being manifested by the Delmar Auto Body and Wheel Company of this city. "Indianapolis for Indianapolis" seems to be the dominant policy of the management of the company. Although doing a capacity business now that is very satisfactory, preference in contracting for future orders will be given to automobile manufacturers either in Indianapolis or the immediate vicinity. The organization of the company grew out of the congested condition which Indianapolis manufacturers were experiencing in building bodies and wheels, and the firm thinks that its first responsibility naturally lies with "home folk."

Within three short months the Delmar Company has grown from a mere idea to a factory, producing plant, occupying more than two acres of floor space and with an equipment consisting of all the modern machinery for producing wheels, bodies and seats. About three hundred men, including draftsmen, sheet metal workers and wheel workers, are employed and the daily output is proving entirely beyond the most promising expectations of the promoters.

HOLDS COURT IN MOTOR CAR.

Magistrate Brown of New York Puts Auto to Strange Service.

The automobile has been put to a variety of curious uses, for which, on the surface, it does not seem intended; but it has remained for Magistrate Brown of New York to use a motor car for a courtroom. The incident is described as follows:

Magistrate Brown held court in a Chalmers touring car in front of the Morrisville Police Court to decide a speeding case in which Edward Bewlyheimer, a manufacturer, 32 years old, of 21 West Sixty-fifth street, who was arrested on Feb. 21 last, charged with speeding on Jerome avenue, near One Hundred and Sixty-ninth street, at twenty-five miles an hour.

The speedometer registration was brought up by the defense and the magistrate held court in the Chalmers car so that he might determine the accuracy of speedometer records as used in similar cases. He made a personal test of Bewlyheimer's statement, that his speedometer registered fourteen miles an hour at the time of his arrest.

JAY GOES WITH U. S. M.

QUITS RACING TO SELL CARS

FAMOUS DRIVER WILL BE ASSISTANT TO DISTRICT MANAGER WITH OFFICE LOCATED IN CHI. CAGO AT ONCE.

Mystery surrounding the activities of Webb Jay, one of the best-known automobile men in the world, a former driver of international fame, inventor, expert mechanic, reliability tour pilot and successful branch manager and salesman, was cleared yesterday by an official announcement by the United States Motor Company. Mr. Jay is appointed assistant to District Manager J. L. Hadley of the new \$15,000,000 corporation, with offices and headquarters in the Maxwell-Briscoe Building, Michigan avenue and Eighteenth street, Chicago.

Mr. Jay, for a time at least, will give his special attention to the marketing of the Columbia car, which recently became one of the "U. S. M." group, with the central and southern states market as its jurisdiction. Both Mr. Hadley and Mr. Jay have departed from Chicago for a flying visit to the principal Southern cities, New Orleans and San Antonio being their chief objectives.

Near Death in One Race.

In the early days of the track racing Driver Jay started the motor world by his daring driving, winning many contests from Olmsted and other well-known drivers. In an accident at Buffalo, in which he was buried through a fence by the wrecking of his racer, Jay was so badly injured that his recovery was doubted. However, upon regaining his health and strength, Mr. Jay promised never to drive in a race again, and satisfied himself with plotting machines in reliability contests.

Amalgamating with the White Steamer interests with the Chicago agency under his control, Mr. Jay became one of the most successful merchants of automobiles in the country. Subsequently he withdrew from the company, contemplating marketing a car of his own manufacture, his steam boiler patents being declared most valuable. Later he became a representative of the Premier company, with Chicago as the basis of his trade operations, and will long be remembered by the Glidden tourists for his admirable plotting of a Premier car in the A. A. tour of 1903.

CAN DRIVE AND ENJOY VARIOUS SCENIC EFFECTS.

There is perhaps no part of the country more famous for its picturesque beauty from the automobile tourist's standpoint than quiet old New England and over its hundreds of miles of splendid highways the motorist can procure more varied scenery and enjoy greater comfort in traveling than in almost any section. With the advent of automobiles and the great strength of the motoring fraternity in these old states has come a great development of the good roads propaganda, and the result is that there are some of the finest trunk lines in existence extending from border to border.

The natural attractions of the region are such that tourists from all over the country lay their courses in that direction during the spring and summer season and those who have once motored there will always look forward to taking other
